Credits for Embroidermodder 2, libembroidery and all other related code

Please note that this file in not in alphabetical order. If you have contributed and wish to be added to this list, create a new credit bullet. Fill it in with your information and submit it to us. Supply your: your full name or pseudonym and GitHub handle, if available.

Kinds of contribution:

- Documentation for changes to README files, manuals or help files.
- · Artwork for artwork other than designs.
- Bug Fixes for small patches of a few lines.
- Translation for large patches to the translation files.
- Designs for an embroidery design sample or parametrized design as a toml file.
- Bindings for programming language bindings for libembroidery.
- Commands for Embroidermodder 2's in-built terminal.

finally there's "Core Developer" which is reserved for long term contributors.

Contributors

- Nina Paley: Designs
- Theodore Gray: Designs
- Jens-Wolfhard Schicke-Uffmann (GitHub Drahflow): Bug Fixes
- Robin Swift: (GitHub robin-swift) Core Developer, Documentation

Introduction

1.1 The Embroidermodder Project and Team

The *Embroidermodder 2* project is a collection of small software utilities for manipulating, converting and creating embroidery files in all major embroidery machine formats. The program *Embroidermodder 2* itself is a larger graphical user interface (GUI) which is at the heart of the project.

The tools and associated documents are:

- The website https://www.libembroidery.org
- This reference manual covering the development of all these projects with the current version available here: https://www.libembroidery.org/embroidermodder_ 2.0_manual.pdf
- The GUI Embroidermodder 2 covered in Chapter ??.
- The core library of low-level functions: 'libembroidery', covered in Chapter ??
- The CLI 'embroider', which is part of libembroidery
- Mobile embroidery format viewers and tools convered in Chapter ??.
- Specs for an open source hardware embroidery machine extension called the Portable Embroidery Tool (PET) which is also part of libembroidery. See Chapter ??.

The website, this manual and some scripts to construct the distribution are maintained in [Team, 2022–2023].

They all tools to make the standard user experience of working with an embroidery machine better without expensive software which is locked to specific manufacturers and formats. But ultimately we hope that the core *Embroidermodder 2* is a practical, ever-present tool in larger workshops, small cottage industry workshops and personal hobbyist's bedrooms.

Embroidermodder 2 is licensed under the zlib license and we aim to keep all of our tools open source and free of charge. If you would like to support the project check out our Open Collective (https://opencollective.com/embroidermodder) group. If you would like to help, please join us on GitHub. This document is written as developer training

as well helping new users (see the last sections) so this is the place to learn how to start changing the code.

The Embroidermodder Team is the collection of people who've submitted patches, artwork and documentation to our three projects. The team was established by Jonathan Greig and Josh Varga. The full list is actively maintained below.

1.1.1 Core Development Team

Embroidermodder 2:

- Jonathan Greig (https://github.com/redteam316)
- Josh Varga (https://github.com/JoshVarga)
- Robin Swift (https://github.com/robin-swift)

Embroidermodder 1:

- Josh Varga (https://github.com/JoshVarga)
- Mark Pontius (http://sourceforge.net/u/mpontius/profile)

1.2 Credits for Embroidermodder 2, libembroidery and all other related code

If you have contributed and wish to be added to this list, alter the README on Embroidermodder github page (https://github.com/Embroidermodder/Embroidermodder) and we'll copy it to the libembroidery source code since that is credited to "The Embroidermodder Team".

1.3 Embroidermodder 1

The Embroidermodder Team is also inspired by the original Embroidermodder that was built by Mark Pontius and the same Josh Varga on SourceForge which unfortunately appears to have died from linkrot. We may create a distribution on here to be the official "legacy" Embroidermodder code but likely in a seperate repository because it's GNU GPL v3 and this code is written to be zlib (that is, permissive licensed) all the way down.

One reason why this is useful is that the rewrite by Jonathan Greig, John Varga and Robin Swift for Embroidermodder 2 should have no regressions: no features present in v1 should be missing in v2.

1.4 Features

Embroidermodder 2 has many advanced features that enable you to create awesome designs quicker, tweak existing designs to perfection, and can be fully customized to fit your workflow.

A summary of these features:

- Cross Platform
- Realistic rendering
- Various grid types and auto-adjusting rulers
- Many measurement tools
- Add text to any design
- Supports many formats
- Batch Conversion
- Scripting API

1.4.1 Cross Platform

If you use multiple operating systems, it's important to choose software that works on all of them.

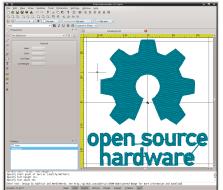

Embroidermodder 2 runs on Windows, Linux and Mac OS X. Let's not forget the Raspberry Pi (https://www.raspberrypi.org).

.Running on different platforms. Running on different platforms

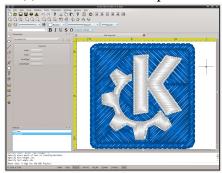

1.4.2 Realistic Rendering

It is important to be able to visualize what a design will look like when stitched and our pseudo "3D" realistic rendering helps achieve this (see Figure ??).

// .Real render examples.

1.4.3 Various grid types and auto-adjusting rulers

Making use of the automatically adjusting ruler in conjunction with the grid will ensure your design is properly sized and fits within your embroidery hoop area.

Use rectangular, circular or isometric grids to construct your masterpiece! Multiple grids and rulers in action Figure ref fig grid-ruler.

// .Grid and ruler examples. imagefeatures-grid-ruler-1.png

1.4.4 Many measurement tools

Taking measurements is a critical part of creating great designs. Whether you are designing mission critical embroidered space suits for NASA or some other far out design for your next meet-up, you will have precise measurement tools at your command to make it happen. You can locate individual points or find distances between any 2 points anywhere in the design!

Take quick and accurate measurements: imageimages/features-measure-1.png

1.4.5 Add text to any design

Need to make company apparel for all of your employees with individual names on them? No sweat. Just simply add text to your existing design or create one from scratch, quickly and easily. Didn't get it the right size or made a typo? No problem. Just select the text and update it with the property editor.

Add text and adjust its properties quickly: imageimages/features-text-1.png

1.4.6 Supports many formats

Embroidery machines all accept different formats. There are so many formats available that it can sometimes be confusing whether a design will work with your machine.

Embroidermodder 2 supports a wide variety of embroidery formats as well as several vector formats, such as SVG and DXF. This allows you to worry less about which designs you can use.

1.4.7 Batch Conversion

Need to send a client several different formats? Just use libembroidery-convert, our command line utility which supports batch file conversion.

There are a multitude of formats to choose from: imageimages/features-formats-1.png[features formats

1.4.8 Scripting API

If you've got programming skills and there is a feature that isn't currently available that you absolutely cannot live without, you have the capability to create your own custom commands for Embroidermodder 2. We provide an QtScript API which exposes various application functionality so that it is possible to extend the application without requiring a new release. If you have created a command that you think is worth including in the next release, just contact us (contact.html) and we will review it for functionality, bugs, and finally inclusion.

An Embroidermodder 2 command excerpt:

```
var striast = str.split(".");
ff(shab(traist(0)) || ishab(striast(1)))
{
    setTroaptPrefix("Foist or option keyverd required.");
    spendTroaptBrefix("Specify second axis end point or [Rotation]: ");
    setTroaptPrefix("Specify second axis end point or [Rotation]: ");
    setSe

| global.x2 = Number(striast(0));
    global.x3 = Number(striast(0));
    global.x3 = Number(striast(0));
    global.x3 = Number(striast(0));
    setTroaptPrefix("ELLPSE_AXIS2_POINT2", global.x3, global.x3, global.x1, global.x1, global.x2, global.x2, global.x2, global.x2, global.x2, global.x2, global.x2, global.x3, global.x3,
```

1.5 Scraps

For Embroidermodder 2.0.0-alpha4, libembroidery 1.0.0-alpha, PET 1.0.0-alpha and EmbroideryMobile 1.0.0-alpha.

Since the document is shipped automatically try to update the revnumber each time you edit using 'revision.sh'.

Test these:

```
# For our command line tools:
makeinfo embroider.texi -o embroider.info
info2man embroider.info > embroider.1
texi2pdf embroider.texi
# Or groff macro package for example ms.
# These may be housed in libembroidery since they're to be shipped as part of
# the embroider tarball.
# For online documentation:
pandoc embroidermodder_refman.tex -f latex -t html -s -o emb_refman.html --bibliography embroidermodder.bi
# Or latexml/latexmlpost
```

1.5.1 Command Language

Printer Command Language (PCL), see Packard [1992].

HP-GL/2 Vector Graphics described in Packard [1992]. Has commands like: "PU" Pen Up, "PR" Plot Relative, "EP" edge polygon.

So commands read like this:

PA40,10;

command argument seperator(,) argument terminator(;)

Constructing new commands from old ones in the command language is less natural in the HP-GL/2 language, but a similar layer for us is the tajima DST format [?] for existing printers and CNC commands for direct control... where'd we'd use G-Code [?] and Linux CNC [?].

Could we 'setpagedevice' to a printer in some cases and a similar CUPS service for embroidery machines in others?

All systems are supported by ghostscript, when you account for homebrew ?:

```
brew update
brew upgrade
brew install ghostscript
brew cleanup
```

Vector graphic logos don't require the SVG Qt library.

1.5.2 Man Pages

We maintain a traditional manpage for embroider using the basic macros.

1.5.3 Arduino

apt-get install avr-libc gcc-avr uisp avrdude

1.6 Libembroidery

(Under construction, please wait for v1.0 release.)

Libembroidery is a low-level library for reading, writing, and altering digital embroidery files in C. It is part of the Embroidermodder Project for open source machine embroidery.

Libembroidery is the underlying library that is used by Embroidermodder 2 and is developed by The Embroidermodder Team ??. A full list of contributors to the project is maintained in https://github.com/Embroidermodder/embroidermodder the Embroidermodder 2 github in the file 'CREDITS.md'. It handles over 45 different embroidery specific formats as well as several non-embroidery specific vector formats.

It also includes a CLI called 'embroider' that allows for better automation of changes to embroidery files and will be more up-to date than the Embroidermodder 2 GUI.

1.6.1 Documentation

Libembroidery is documented as part of this reference manual. If you need libembroidery for any non-trivial usage or want to contribute to the library we advise you read the appropriate design sections of the manual first. Copies of this manual will be shipped with the packaged version of libembroidery, but to build it we use the Doxyfile in https://github.com/Embroidermodder/embroidermodder the Embroidermodder git repository.

For more basic usage, 'embroider' should have some in-built help starting with:

\$ embroider --help

1.6.2 License

Libembroidery is distributed under the permissive zlib licence, see the LICENCE file.

1.7 Demos

We're currently trying out some fill techniques which will be demonstrated here and in the script 'qa_test.sh'.

// center and caption imageimages/examples/logo.png[the logo Converts to:

// center and caption crossstitch logo

1.7.1 Build

libembroidery and EmbroiderModder 2 use CMake builds so if you are building the project to use as a library we recommend you run:

```
git clone https://github.com/Embroidermodder/libembroidery
cd libembroidery
cmake .
cmake --build .
cmake --install .
```

This builds both the static and shared versions of the library as well as the command line program 'embroider'.

1.8 Graphical User Interface for PC

??

1.8.1 Overview

UNDER MAJOR RESTRUCTURING, PLEASE WAIT FOR VERSION 2

https://www.libembroidery.org

Embroidermodder is a free machine embroidery application. The newest version, Embroidermodder 2 can:

• edit and create embroidery designs

- estimate the amount of thread and machine time needed to stitch a design
- · convert embroidery files to a variety of formats
- upscale or downscale designs
- · run on Windows. Mac and Linux

Embroidermodder 2 is very much a work in progress since we're doing a ground up rewrite to an interface in C using the GUI toolkit SDL2. The reasoning for this is detailed in the issues tab.

For a more in-depth look at what we are developing read our website (https://www.libembroidery.org) which includes these docs as well as the up-to date printer-friendly versions. These discuss recent changes, plans and has user and developer guides for all the Embroidermodder projects.

To see what we're focusing on right now, see the Open Collective News (https://opencollective.com/embroidermodder).

// fixme This current printer-friendly version is here (https://www.libembroidery.
org/EM2.0.0-alpha_refman_a4.pdf).

1.8.2 License

The source code is under the terms of the zlib license: see 'LICENSE.md' in the source code directory.

Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts.

A copy of the license is included in Section ??.

1.8.3 Build and Install

Assuming you already have the SDL2 libraries you can proceed to using the fast build, which assumes you want to build and test locally.

The fast build should be:

bash build.sh

or, on Windows:

.\build.bat

Then run using the 'run.bat' or 'run.sh' scripts in the build/ directory. Otherwise, follow the instructions below.

If you plan to install the dev version to your system (we recommend you wait for the official installers and beta release first) then use the CMake build instead.

1.8.4 Install on Desktop

We recommend that if you want to install the development version you use the CMake build. Like this:

```
git submodule --init --update

mkdir build

d cd build

cmake ..

cmake --build .

sudo cmake --install .
```

These lines are written into the file:

```
1 ./build_install.sh
```

On Windows use the next section.

1.9 History

Embroidermodder 1 was started by Mark Pontius in 2004 while staying up all night with his son in his first couple months. When Mark returned to his day job, he lacked the time to continue the project. Mark made the decision to focus on his family and work, and in 2005, Mark gave full control of the project to Josh Varga so that Embroidermodder could continue its growth.

Embroidermodder 2 was conceived in mid 2011 when Jonathan Greig and Josh Varga discussed the possibility of making a cross-platform version. It is currently in active development and will run on GNU/Linux, Mac OS X, Microsoft Windows and Raspberry Pi.

All Embroidermodder downloads (downloads.html) are hosted on SourceForge.

The source code for Embroidermodder 1 (http://sourceforge.net/p/embroidermodder/code/HEAD/tree/embroidermodder1) has always been hosted on Sourceforge.

The source code for Embroidermodder 2 (https://github.com/Embroidermodder/Embroidermodder) was moved to GitHub on July 18, 2013.

The website for Embroidermodder (https://github.com/Embroidermodder/www.libembroidery.org) was moved to GitHub on September 9, 2013.

Contact us

For general questions email: embroider modder at gmail.com (mailto:embroider modder@gmail.com)

To request a new feature open an issue on the main Embroidermodder GitHub repository (https://github.com/Embroidermodder/Embroidermodder/issues). We'll move it to the correct repository.

Downloads

3.1 Alpha Build

This is a highly experimental build: we recommend users wait for the beta release when the basic features are functional.

Visit our GitHub Releases page (https://github.com/Embroidermodder/Embroidermodder/releases) for the current build. Unfortunately, earlier builds went down with the Sourceforge page we hosted them on.

GUI

Embroidermodder 2 is very much a work in progress since we're doing a ground up rewrite to an interface in Python using the GUI toolkit Tk. The reasoning for this is detailed in the issues tab.

For a more in-depth look at what we are developing read the developer notes (link to dev notes section). This discusses recent changes in a less formal way than a changelog (since this software is in development) and covers what we are about to try.

4.1 Documentation

The documentation is in the form of the website (included in the 'docs/' directory) and the printed docs in this file.

4.1.1 Development

If you wish to develop with us you can chat via the contact email on the website (https://www.libembroidery.org) or in the issues tab on the github page (https://github.com/Embroidermodder/Embroidermodder/issues). People have been polite and friendly in these conversations and I (Robin) have really enjoyed them. If we do have any arguments please note we have a Code of Conduct ('CODE_OF_CONDUCT.md') so there is a consistent policy to enforce when dealing with these arguments.

The first thing you should try is building from source using the build advice(link to build) above. Then read some of the development notes (link to dev notes.md) to get the general layout of the source code and what we are currently planning.

4.1.2 Testing

To find unfixed errors run the tests by launching from the command line with:

```
1 | $ embroidermodder --test
```

then dig through the output. It's currently not worth reporting the errors, since there are so many but if you can fix anything reported here you can submit a PR.

4.2 Code Optimisations and Simplifications

4.2.1 Geometry

The geometry is stored, processed and altered via libembroidery. See the Python specific part of the documentation for libembroidery for this. What the code in Embroidermodder does is make the GUI widgets to change and view this information graphically.

For example if we create a circle with radius 10mm and center at '(20mm, 30mm)' then fill it with stitches the commands would be

```
from libembroidery import Pattern, Circle, Vector, satin
circle = Circle(Vector(20, 30), 10)
pattern = Pattern()
pattern.add_circle(circle, fill=satin)
pattern.to_stitches()
```

but the user would do this through a series of GUI actions:

- 1. Create new file
- 2. Click add circle
- 3. Use the Settings dialog to alter the radius and center
- 4. Use the fill tool on circle
- 5. Select satin from the drop down menu

So EM2 does the job of bridging that gap.

4.2.2 Postscript Support

In order to safely support user contributed/shared data that can define, for example, double to double functions we need a consistent processor for these descriptions.

Embroidermodder backends to the postscript interpreter included in libembroidery to accomplish this.

For example the string: '5 2 t mul add' is equivalent to the expression 2*t+5.

The benefit of not allowing this to simply be a Python expression is that it is safe against malicious use, or accidental misuse. The program can identify whether the output is of the appropriate form and give finitely many calculations before declaring the function to have run too long (stopping equations that hang).

To see examples of this see the assets/shapes/*.ps files.

4.2.3 SVG Icons

To make the images easier to alter and restyle we could switch to svg icons. There's some code in the git history to help with this.

4.2.4 The Actions System

In order to simplify the development of a GUI that is flexible and easy to understand to new developers we have a custom action system that all user actions will go via an actuator that takes a string argument. By using a string argument the undo history is just an array of strings.

The C action_hash_data struct will contain: the icon used, the labels for the menus and tooltips and the function pointer for that action. There will be an accompanying argument for this function call, currently being drafted as 'action_call'. So when the user makes a function call it should contain information like the mouse position, whether special key is pressed etc.

4.2.5 Accessibility

Software can be more or less friendly to people with dyslexia, partial sightedness, reduced mobility and those who don't speak English. Embroidermodder 2 has, in its design, the following features to help:

- icons for everything to reduce the amount of reading required
- the system font is configurable: if you have a dyslexia-friendly font you can load it
- the interface rescales to help with partial-sightedness
- the system language is configurable, unfortunately the docs will only be in English but we can try to supply lots of images of the interface to make it easier to understand as a second language
- buttons are remappable: XBox controllers are known for being good for people with reduced mobility so remapping the buttons to whatever setup you have should help

Note that most of these features will be released with version 2.1, which is planned for around early 2023.

4.2.6 Sample Files

Various sample embroidery design files can be found in the 'embroidermodder2/samples' folder.

4.2.7 Shortcuts

A shortcut can be made up of zero or more modifier keys and at least one non-modifier key pressed at once.

To make this list quickly assessable, we can produce a list of hashes which are simply the flags ORed together.

The shortcuts are stored in the csv file 'shortcuts.csv' as a 5-column table with the first 4 columns describing the key combination. This is loaded into the shortcuts 'TABLE'. Each tick the program checks the input state for this combination by first translating the key names into indices for the key state, then checking for whether all of them are set to true.

4.2.8 Removed Elements

So I've had a few pieces of web infrastructure fail me recently and I think it's worth noting. An issue that affects us is an issue that can effect people who use our software.

4.2.9 Qt and dependencies

Downloading and installing Qt has been a pain for some users (46Gb on possibly slow connections).

I'm switching to FreeGLUT 3 (which is a whole other conversation) which means we can ship it with the source code package meaning only a basic build environment is necessary to build it.

4.2.10 Social Platform

Github is giving me a server offline (500) error and is still giving a bad ping.

So... all the issues and project boards etc. being on Github is all well and good assuming that we have our own copies. But we don't if Github goes down or some other major player takes over the space and we have to move (again, since this started on SourceForge).

This file is a backup for that which is why I'm repeating myself between them.

4.2.11 OpenGL

OpenGL rendering within the application. This will allow for Realistic Visualization - Bump Mapping/OpenGL/Gradients?

This should backend to a C renderer or something.

4.2.12 Configuration Data Ideas

Embroidermodder should boot from the command line regardless of whether it is or is not installed (this helps with testing and running on machines without root). Therefore, it can create an initiation file but it won't rely on its existence to boot: '/.embroidermodder/config.json'.

- Switch colors to be stored as 6 digit hexcodes with a '#'.
- We've got close to a hand implemented ini read/write setup in 'settings.py'.

4.2.13 Distribution

When we release the new pip wheel we should also package:

- '.tar.gz' and '.zip' source archive.
- Debian package
- RPM package

Only do this once per minor version number.

todo Screenshot a working draft to demonstrate.

4.2.14 Perennial Jobs

- · Check for memory leaks
- Clear compiler warnings on '-Wall -ansi -pedantic' for C.
- Write new tests for new code.
- Get Embroidermodder onto the current version of libembroidery.
- PEP7 compliance.
- Better documentation with more photos/screencaps.

4.2.15 Full Test Suite

(This needs a hook from Embroidermodder to embroider's full test suite.)

The flag '-full-test-suite' runs all the tests that have been written. Since this results in a lot of output the details are both to stdout and to a text file called 'test_matrix.txt'.

Patches that strictly improve the results in the 'test_matrix.txt' over the current version will likely be accepted and it'll be a good place to go digging for contributions. (Note: strictly improve means that the testing result for each test is as good a result, if not better. Sacrificing one critera for another would require some design work before we would consider it.)

4.2.16 Symbols

Symbols use the SVG path syntax.

In theory, we could combine the icons and symbols systems, since they could be rendered once and stored as icons in Qt. (Or as textures in FreeGLUT.)

Also we want to render the patterns themselves using SVG syntax, so it would save on repeated work overall.

4.3 Features

4.3.1 Bindings

Bindings for libembroidery are maintained for the languages we use internally in the project, for other languages we consider that the responsibility of other teams using the library.

So libembroidery is going to be supported on:

- 'C' (by default)
- 'C++' (also by default)
- 'Java' (for the Android application MobileViewer)
- 'Swift' (for the iOS application iMobileViewer)

For 'C#' we recommend directly calling the function directly using the DllImport feature:

```
1 /* Calling readCsv() via C# as a native function. */
2 [DllImport("libembroidery.so", EntryPoint="readCsv")]
```

see this StackOverflow discussion for help: https://stackoverflow.com/questions/11425202/is-it-possible-to-call-a-c-function-from-c-net.

For Python you can do the same using ctypes: https://www.geeksforgeeks.org/how-to-call-a-c-function-in-python/.

4.3.2 Other Supported Thread Brands

The thread lists that aren't preprogrammed into formats but are indexed in the data file for the purpose of conversion or fitting to images/graphics.

- Arc Polyester
- Arc Rayon
- · Coats and Clark Rayon
- Exquisite Polyester
- Fufu Polyester
- Fufu Rayon
- Hemingworth Polyester
- Isacord Polyester
- Isafil Rayon
- Marathon Polyester
- Marathon Rayon
- Madeira Polyester
- · Madeira Rayon
- Metro Polyester
- Pantone
- Robison Anton Polyester
- Robison Anton Rayon
- Sigma Polyester
- Sulky Rayon
- ThreadArt Rayon
- ThreadArt Polyester
- ThreaDelight Polyester
- Z102 Isacord Polyester

4.4 House Style

These are rules for the general intended style of Embroidermodder's GUI source code. Not included are anything that a compiler will warn you about: fixing compiler warnings is more important than fixing style.

Most of this section is rationale, so skip to the end for the summary.

NEW DEVELOPERS: if your patch to Embroidermodder doesn't follow these rules, don't worry about it. We only ask that your source code follow the basic rules in the developer training section. These rules are for sculpting Embroidermodder into a body of code that is resiliant to future bugs and reliable for users.

4.4.1 Brevity

Readable source code is short. Developers have finite time and becoming acquainted with more than 1000 lines of dense C code is often too high a bar for a new developer to a project. However, this leads to a bunch of tradeoffs that have caused issues, so instead we consider the "minimal library" rather than "minimal code" approach. Not everyone will have used the more abstract, syntactic features of C++ like templates and operator overloading. Even if they are capable developers with these features it makes debugging far harder since the choice of called function is interpreted by the compiler and compiler errors are hundred line monsters per infraction of "these are all of the possible variations of this function that don't match".

Using C++'s 'unordered_map' can simplify source code in that anything can map to anything. However, it also means we don't have to associate related structures. For example the 'action_table' came together replacing a collection of unordered maps with one, then replaced the mapping with labelled indices. Since the 'actuator_core' is a giant switch/case statement this cuts the step of identifying the action by its label 'std::string'. The structure given by this table allowed the code to be much easier to interpret. So for this reason we don't recommend the use unordered maps or hashes any more.

4.4.2 Rigidity Vs. Ease of Modification

Difficult to restructure code is good if the structure that's there is good. It guides new developers into safe practices without having to explain them. Therefore we want ease of modification that comes from well chosen 'structs' and a carefully curated global header of .

4.4.3 Developer Prose

4.4.4 Macro Policy

Macros are great, you can do all sorts with them. But it's easy to make readable short code that is really difficult to safely modify.

4.4.5 Function Style

1. Don't write a new convenience function unless there are two existing applications of it in the source code.

2.

4.4.6 Summary

•

4.5 GUI Design

Embroidermodder 2 was written in C++/Qt5 and it was far too complex. We had issues with people not able to build from source because the Qt5 libraries were so ungainly. So I decided to do a rewrite in C/SDL2 (originally FreeGLUT, but that was a mistake) with data stored as YAML. This means linking 4-7 libraries depending on your system which are all well supported and widely available.

This is going well, although it's slow progress as I'm trying to keep track of the design while also doing a ground up rewrite. I don't want to throw away good ideas. Since I also write code for libembroidery my time is divided.

Overview of the UI rewrite

(Problems to be solved in brackets.)

It's not much to look at because I'm trying to avoid using an external widgets system, which in turn means writing things like toolbars and menubars over. If you want to get the design the actuator is the heart of it.

Without Qt5 we need a way of assigning signals with actions, so this is what I've got: the user interacts with a UI element, this sends an integer to the actuator that does the thing using the current state of the mainwindow struct of which we expect there to be exactly one instance. The action is taken out by a jump table that calls the right function (most of which are missing in action and not connected up properly). It also logs the number, along with key parts of the main struct in the undo history (an unsolved problem because we need to decide how much data to copy over per action). This means undo, redo and repeat actions can refer to this data.

4.6 To Do

These should be sorted into relevant code sections.

- todo sort todo list.
- Alpha: High priority
 - Statistics from 1.0, needs histogram
 - Saving DST/PES/JEF (varga)
 - Saving CSV/SVG (rt) + CSV read/write UNKNOWN interpreted as COLOR bug
- Alpha: medium priority
 - Notify user of data loss if not saving to an object format.
 - Import Raster Image
 - SNAP/ORTHO/POLAR

- Layer Manager + LayerSwitcher DockWidget
- Reading DXF
- Alpha: low priority
 - Writing DXF
 - Up and Down keys cycle thru commands in the command prompt
 - Amount of Thread, Machine Time Estimation (also allow customizable times for setup, color changes, manually trimming jump threads, etc...that way a realistic total time can be estimated)
 - Otto Theme Icons whatsthis icon doesn't scale well, needs redone
 - embroidermodder2.ico 16 x 16 looks horrible
- Alpha: lower priority
 - CAD Command: Arc (rt)
- beta
 - Custom Filter Bug doesn't save changes in some cases
 - Cannot open file with '#' in name when opening multiple files (works fine when opening the single file)
 - Closing Settings Dialog with the X in the window saves settings rather than discards them
 - Advanced Printing
 - Filling Algorithms (varga)
 - Otto Theme Icons beta (rt) Units, Render, Selectors
- Finish before 2.0 release
 - QDoc Comments
 - Review KDE4 Thumbnailer
 - Documentation for libembroidery and formats
 - HTML Help files
 - Update language translations
 - CAD Command review: line
 - CAD Command review: circle
 - CAD Command review: rectangle
 - CAD Command review: polygon
 - CAD Command review: polyline
 - CAD Command review: point
 - CAD Command review: ellipse
 - CAD Command review: arc
 - CAD Command review: distance
 - CAD Command review: locatepoint

- CAD Command review: move
- CAD Command review: rgb
- CAD Command review: rotate
- CAD Command review: scale
- CAD Command review: singlelinetext
- CAD Command review: star
- Clean up all compiler warning messages, right now theres plenty:P

• 2.0

- tar.gz archive
- zip archive
- Debian Package (rt)
- NSIS Installer (rt)
- Mac Bundle?
- press release

• 2.x/Ideas

- libembroidery.mk for MXE project (refer to qt submodule packages for qmake based building. Also refer to plibc.mk for example of how write an update macro for github.)
- libembroidery safeguard for all writers check if the last stitch is an END stitch. If not, add an end stitch in the writer and modify the header data if necessary.
- Cut/Copy Allow Post-selection
- CAD Command: Array
- CAD Command: Offset
- CAD Command: Extend
- CAD Command: Trim
- CAD Command: BreakAtPoint
- CAD Command: Break2Points
- CAD Command: Fillet
- CAD Command: Chamfer
- CAD Command: Split
- CAD Command: Area
- CAD Command: Time
- CAD Command: PickAdd
- CAD Command: Product
- CAD Command: Program
- CAD Command: ZoomFactor
- CAD Command: GripHot

- CAD Command: GripColor and GripCool
- CAD Command: GripSize
- CAD Command: Highlight
- CAD Command: Units
- CAD Command: Grid
- CAD Command: Find
- CAD Command: Divide
- CAD Command: ZoomWindow (Move out of view.cpp)
- Command: Web (Generates Spiderweb patterns)
- Command: Guilloche (Generates Guilloche patterns)
- Command: Celtic Knots
- Command: Knotted Wreath
- Lego Mindstorms NXT/EV3 ports and/or commands.
- native function that flashes the command prompt to get users attention when using the prompt is required for a command.
- libembroidery-composer like app that combines multiple files into one.
- Settings Dialog, it would be nice to have it notify you when switching tabs that a setting has been changed. Adding an Apply button is what would make sense for this to happen.
- Keyboard Zooming/Panning
- G-Code format?
- 3D Raised Embroidery
- Gradient Filling Algorithms
- Stitching Simulation
- RPM packages?
- Reports?
- Record and Playback Commands
- Settings option for reversing zoom scrolling direction
- Qt GUI for libembroidery-convert
- EPS format? Look at using Ghostscript as an optional add-on to libembroidery...
- optional compile option for including LGPL/GPL libs etc... with warning to user about license requirements.
- Realistic Visualization Bump Mapping/OpenGL/Gradients?
- Stippling Fill
- User Designed Custom Fill
- Honeycomb Fill
- Hilbert Curve Fill
- Sierpinski Triangle fill

- Circle Grid Fill
- Spiral Fill
- Offset Fill
- Brick Fill
- Trim jumps over a certain length.
- FAQ about setting high number of jumps for more controlled trimming.
- Minimum stitch length option. (Many machines also have this option too)
- Add 'Design Details' functionality to libembroidery-convert
- Add 'Batch convert many to one format' functionality to libembroidery-convert
- EmbroideryFLOSS Color picker that displays catalog numbers and names.

• beta

- Realistic Visualization Bump Mapping/OpenGL/Gradients?
- Get undo history widget back (BUG).
- Mac Bundle, .tar.gz and .zip source archive.
- NSIS installer for Windows, Debian package, RPM package
- GUI frontend for embroider features that aren't supported by embroidermodder: flag selector from a table
- Update all formats without color to check for edr or rgb files.
- Setting for reverse scrolling direction (for zoom, vertical pan)
- Keyboard zooming, panning
- New embroidermodder2.ico 16x16 logo that looks good at that scale.
- Saving dst, pes, jef.
- Settings dialog: notify when the user is switching tabs that the setting has been changed, adding apply button is what would make sense for this to happen.
- Update language translations.
- Replace KDE4 thumbnailer.
- Import raster image.
- Statistics from 1.0, needs histogram.
- SNAP/ORTHO/POLAR.
- Cut/copy allow post-selection.
- Layout into config.
- Notify user of data loss if not saving to an object format.
- Add which formats to work with to preferences.
- Cannot open file with '#' in the name when opening multiple files but works with opening a single file.
- Closing settings dialog with the X in the window saves settings rather than discarding them.

- Otto theme icons: units, render, selectors, what's this icon doesn't scale.
- Layer manager and Layer switcher dock widget.
- Test that all formats read data in correct scale (format details should match other programs).
- Custom filter bug doesn't save changes in some cases.
- Tools to find common problems in the source code and suggest fixes to the developers. For example, a translation miss: that is, for any language other than English a missing entry in the translation table should supply a clear warning to developers.
- Converting Qt C++ version to native GUI C throughout.
- OpenGL Rendering: 'Real' rendering to see what the embroidery looks like, Icons and toolbars, Menu bar.
- Libembroidery interfacing: get all classes to use the proper libembroidery types within them. So 'Ellipse' has 'EmbEllipse' as public data within it.
- Move calculations of rotation and scaling into 'EmbVector' calls.
- GUI frontend for embroider features that aren't supported by embroider-modder: flag selector from a table
- Update all formats without color to check for edr or rgb files.
- Setting for reverse scrolling direction (for zoom, vertical pan)
- Keyboard zooming, panning
- Better integrated help: I don't think the help should backend to a html file somewhere on the user's system. A better system would be a custom widget within the program that's searchable.
- New embroidermodder2.ico 16x16 logo that looks good at that scale.
- Settings dialog: notify when the user is switching tabs that the setting has been changed, adding apply button is what would make sense for this to happen.

4.7 Contributing

4.7.1 Version Control

Being an open source project, developers can grab the latest code at any time and attempt to build it themselves. We try our best to ensure that it will build smoothly at any time, although occasionally we do break the build. In these instances, please provide a patch, pull request which fixes the issue or open an issue and notify us of the problem, as we may not be aware of it and we can build fine.

Try to group commits based on what they are related to: features/bugs/comments/graphics/commands/etc...

See the coding style here (coding-style).

4.7.2 Get the Development Build going

When we switch to releases we recommend using them, unless you're reporting a bug in which case you can check the development build for whether it has been patched. If this applies to you, the current development build is https://github.com/Embroidermodder/Embroidermodder

4.7.3 To Do

- Beta
 - Libembroidery 1.0.
 - Better integrated help: I don't think the help should backend to a html file somewhere on the user's system. A better system would be a custom widget within the program that's searchable.
 - EmbroideryFLOSS Color picker that displays catalog numbers and names.
 - Custom filter bug doesn't save changes in some cases.
 - Advanced printing.
 - Stitching simulation.
- 2.x/ideas
 - User designed custom fill.

These are key bits of reasoning behind why the GUI is built the way it is.

4.8 Translation of the user interface

In a given table the left column is the default symbol and the right string is the translation. If the translate function fails to find a translation it returns the default symbol.

So in US English it is an empty table, but in UK English only the dialectical differences are present.

Ideally, we should support at least the 6 languages spoken at the UN. Quoting https://www.un.org

There are six official languages of the UN. These are Arabic, Chinese, English, French, Russian and Spanish.

We're adding Hindi, on the grounds that it is one of the most commonly spoken languages and at least one of the Indian languages should be present.

Written Chinese is generally supported as two different symbol sets and we follow that convension.

English is supported as two dialects to ensure that the development team is aware of what those differences are. The code base is written by a mixture of US and UK native English speakers meaning that only the variable names are consistently one dialect: US English. As for documentation: it is whatever dialect the writer prefers (but they should maintain consistency within a text block like this one).

Finally, we have "default", which is the dominant language of the internals of the software. Practically, this is just US English, but in terms of programming history this is the "C locale".

4.9 Old action system notes

Action: the basic system to encode all user input.

This typedef gives structure to the data associated with each action which, in the code, is referred to by the action id (an int from the define table above).

4.10 DESCRIPTION OF STRUCT CONTENTS

4.10.1 label

The action label is always in US English, lowercase, seperated with hyphens. For example: new-file.

4.11 Flags

The bit based flags all collected into a 32-bit integer.

C	cols="1,6",title="Flags of EM actions"	bit(s)	description
		0	User (0) or system (1) permissions.
		1-3	The mode of input.
		4-8	The object classes that this action can be applied to.
		9-10	What menu (if any) should it be present in.
		11-12	What

4.12 Description

The string placed in the tooltip describing the action.

4.13 Original Prompt System

NOTE: 'main()' is run every time the command is started. Use it to reset variables so they are ready to go.

NOTE: 'click()' is run only for left clicks. Middle clicks are used for panning. Right clicks bring up the context menu.

NOTE: 'move()' is optional. It is run only after 'enableMoveRapidFire()' is called. It will be called every time the mouse moves until 'disableMoveRapidFire()' is called.

NOTE: 'prompt()' is run when Enter is pressed. 'appendPromptHistory' is automatically called before 'prompt()' is called so calling it is only needed for erroneous input. Any text in the command prompt is sent as an uppercase string.

4.14 CAD command review

```

- todo: US letter paper version of printed docs.

Chapter 5

Formats

5.1 Overview

Read/Write Support Levels

The table of read/write format support levels uses the status levels described here:

Status Label *Description*

'rw-none' Either the format produces no output, reporting A file somewhat similar to our examples is produced in this format run well on maching a file somewhat similar to our examples is produced in this format run well on maching in the files with non-standard features work on

These can be split into 'r-basic w-none', for example, if they don't match.

So all formats can, in principle, have good read and good write support, because it's defined in relation to files that we have described the formats for.

Test Support Levels

Status Label
'test-none'

cols="1,8" | 'test-basic'
| 'test-thorough' | All features of that format has at least one test.
'test-fuzz' Can test the format for uses of features that we haven't thought of by feeding in nor 'test-complete'

So all formats can, in principle, have complete testing support, because it's defined in relation to files that we have described the formats for.

Documentation Support Levels

Status Label	Description
'doc-none'	We haven't researched this beyond finding example files.
'doc-basic'	We have a rough sketch of the size and contents of the header if there is one. We know
'doc-standard'	We know some good sources and/or have tested all the features that appear to exist. The
'doc-good'	All features that were described somewhere have been covered here or we have thoroug
'doc-complete'	There is a known official description and our description covers all the same features.

Not all formats can have complete documentation because it's based on what information is publically available. So the total score is reported in the table below based on what level we think is available.

Overall Support

Since the overall support level is the combination of these 4 factors, but rather than summing up their values it's an issue of the minimum support of the 4.

Status Label	Description
'read-only'	If write support is none and read support is not none.
'write-only'	If read support is none and write support is not none.
'unstable'	If both read and write support are not none but testing or documentation is none.
'basic'	If all ratings are better than none.
'reliable'	If all ratings are better than basic.
'complete'	If all ratings could not reasonably be better (for example any improvements rely on i
'experimental'	For all other scenarios.

5.2 Table of Format Support Levels

Overview of documentation support by format.

```
*Format*

| Embroidery Format (.100') | rw-basic doc-none test-none | unstable |
| Embroidery Format (.100') | rw-basic doc-none test-none | unstable |
| Embroidery Format (.100') | rw-basic doc-none test-none | unstable |
| Embroidery Format ('.art') | rw-none doc-none test-none | experimental |
| Embroidery Format ('.bmc') | r-basic w-none doc-none test-none | unstable |
| Embroidery Format ('.bro') | rw-none doc-none test-none | experimental |
| Melco Embroidery Format ('.cnd') | rw-none doc-none test-none | experimental |
| Embroidery Thread Color Format ('.col') | rw-basic doc-none test-none | experimental |
| Singer Embroidery Format ('.csd') | rw-none doc-none test-none | experimental |
| Barudan Embroidery Format ('.dat') | rw-none doc-none test-none | experimental |
| Melco Embroidery Format ('.dem) | rw-none doc-none test-none | experimental |
```

- TODO Josh, Review this section and move any info still valid or needing work into TODO comments in the actual libembroidery code. Many items in this list are out of date and do not reflect the current status of libembroidery. When finished, delete this file.
 - Test that all formats read data in correct scale (format details should match other programs)
 - Add which formats to work with to preferences.
 - Check for memory leaks
 - Update all formats without color to check for edr or rgb files
 - Fix issues with DST (VERY important that DST work well)
- todo Support for Singer FHE, CHE (Compucon) formats?

Chapter 6

Geometry and Algorithms

6.1 To Do

Arduino

- Fix emb-outline files
- · Fix thread-color files
- Logging of Last Stitch Location to External USB Storage(commonly available and easily replaced) ...wait until TRE is available to avoid rework
- inotool.org seems like the logical solution for Nightly/CI builds
- Smoothieboard experiments

Testing

looping test that reads 10 times while running valgrind. See 'embPattern_loadExternalColorFile()'
 Arduino leak note for more info.

Development

If you wish to develop with us you can chat via the contact email on the website https://libembroidery.org or in the issues tab on the github page https://github.com/Embroidermodder/Embroidermodder/issues. People have been polite and friendly in these conversations and I (Robin) have really enjoyed them. If we do have any arguments please note we have a Code of Conduct CODE_OF_CONDUCT.md so there is a consistent policy to enforce when dealing with these arguments.

The first thing you should try is building from source using the build advice (build) above. Then read some of the manual https://libembroidery.org/emrm_alpha_a4.pdf to get the general layout of the source code and what we are currently planning.

Testing

To find unfixed errors run the tests by launching from the command line with:

1 | \$ embroidermodder --test

then dig through the output. It's currently not worth reporting the errors, since there are so many but if you can fix anything reported here you can submit a PR.

6.2 Contributing

Funding

The easiest way to help is to fund development (see the Donate button above), since we can't afford to spend a lot of time developing and only have limited kit to test out libembroidery on.

Programming and Engineering

Should you want to get into the code itself:

- Low level C developers are be needed for the base library libembroidery.
- Low level assembly programmers are needed for translating some of libembroidery to EmbroiderBot.
- Hardware Engineers to help design our own kitbashed embroidery machine EmbroiderBot, one of the original project aims in 2013.
- Scheme developers and C/SDL developers to help build the GUI.
- Scheme developers to help add designs for generating of custom stitch-filled emblems like the heart or dolphi. Note that this happens in Embroidermodder not libembroidery (which assumes that you already have a function available).

Writing

We also need people familiar with the software and the general machine embroidery ecosystem to contribute to the documentation (https://github.com/Embroidermodder/www.libembroidery

We need researchers to find references for the documentation: colour tables, machine specifications etc. The history is murky and often very poorly maintained so if you know anything from working in the industry that you can share: it'd be appreciated!

6.3 Embroidermodder Project Coding Standards

A basic set of guidelines to use when submitting code.

Code structure is mre important than style, so first we advise you read "Design" and experimenting before getting into the specifics of code style.

Where Code Goes

Anything that deals with the specifics of embroidery file formats, threads, rendering to images, embroidery machinery or command line interfaces should go in 'libembroidery' not here.

Where Non-compiled Files Go

TODO: Like most user interfaces Embroidermodder is mostly data, so here we will have a list describing where each CSV goes.

Ways in which we break style on purpose

Most style guides advise you to keep functions short. We make a few pointed exceptions to this where the overall health and functionality of the source code should benefit.

The 'actuator' function will always be a mess and it should be: we're keeping the total source lines of code down by encoding all user action into a descrete sequence of strings that are all below _STRING_LENGTH in length. See the section on the actuator (TODO) describing why any other solution we could think here would mean more more code without a payoff in speed of execution or clarity.

6.4 Version Control

Being an open source project, developers can grab the latest code at any time and attempt to build it themselves. We try our best to ensure that it will build smoothly at any time, although occasionally we do break the build. In these instances, please provide a patch, pull request which fixes the issue or open an issue and notify us of the problem, as we may not be aware of it and we can build fine.

Try to group commits based on what they are related to: features/bugs/comments/graphics/commands/etc...

6.5 Donations

Creating software that interfaces with hardware is costly. A summary of some of the costs involved:

- Developer time for 2 core developers
- Computer equipment and parts
- Embroidery machinery
- Various electronics for kitbashing Embroiderbot
- Consumable materials (thread, fabric, stabilizer, etc...)

If you have found our software useful, please consider funding further development by donating to the project on Open Collective (https://opencollective.com/embroidermodder).

6.6 Embroidermodder Project Coding Standards

Rather than maintain our own standard for style, please defer to the Python's PEP 7 [van Rossum and Warsaw, 2001] for C style and emulating that in C++.

A basic set of guidelines to use when submitting code. Defer to the PEP7 standard with the following additions:

- All files and directories shall be lowercase and contain no spaces.
- Structs and class names should use 'LeadingCapitals'.
- Enums and constants should be 'BLOCK_CAPITALS'.
- Class members and functions without a parent class should be 'snake_case'. With the exception of when one of the words is a "class" name from libembroidery in which case it has the middle capitals like this: 'embArray_add'.
- Don't use exceptions.
- Don't use ternary operator (?:) in place of if/else.
- Don't repeat a variable name that already occurs in an outer scope.

6.6.1 Version Control

Being an open source project, developers can grab the latest code at any time and attempt to build it themselves. We try our best to ensure that it will build smoothly at any time, although occasionally we do break the build. In these instances, please provide a patch, pull request which fixes the issue or open an issue and notify us of the problem, as we may not be aware of it and we can build fine.

Try to group commits based on what they are related to: features/bugs/comments/graphics/commands/etc...

6.6.2 Comments

When writing code, sometimes there are items that we know can be improved, incomplete or need special clarification. In these cases, use the types of comments shown below. They are pretty standard and are highlighted by many editors to make reviewing code easier. We also use shell scripts to parse the code to find all of these occurrences so someone wanting to go on a bug hunt will be able to easily see which areas of the code need more love.

libembroidery and Embroidermodder are written in C and adheres to C89 standards. This means that any C99 or C++ comments will show up as errors when compiling with gcc. In any C code, you must use:

```
1  /* Use C Style Comments within code blocks.
2  *
3  * Use Doxygen style code blocks to place todo, bug, hack, warning,
4  * and note items like this:
5  *
6  * \todo EXAMPLE: This code clearly needs more work or further review.
7  *
```

6.7 Ideas

6.7.1 Why this document

I've been trying to make this document indirectly through the Github issues page and the website we're building but I think a straightforward, plain-text file needs to be the ultimate backup for this. Then I can have a printout while I'm working on the project.

6.7.2 Qt and dependencies

I'm switching to SDL2 (which is a whole other conversation) which means we can ship it with the source code package meaning only a basic build environment is necessary to build it.

6.7.3 Documentation

Can we treat the website being a duplicate of the docs a non-starter? I'd be happier with tex/pdf only and (I know this is counter-intuitive) one per project.

6.7.4 Social Platform

So... all the issues and project boards etc. being on Github is all well and good assuming that we have our own copies. But we don't if Github goes down or some other major player takes over the space and we have to move (again, since this started on SourceForge).

This file is a backup for that which is why I'm repeating myself between them.

6.7.5 Identify the meaning of these TODO items

- Saving CSV/SVG (rt) + CSV read/write UNKNOWN interpreted as COLOR bug '#179'
- Lego Mindstorms NXT/EV3 ports and/or commands

6.7.6 Progress Chart

The chart of successful from-to conversions (previously a separate issue) is something that should appear in the README.

6.7.7 Standard

The criteria for a good Pull Request from an outside developer has these properties, from most to least important:

- No regressions on testing.
- Add a feature, bug fix or documentation that is already agreed on through GitHub issues or some other way with a core developer.
- No GUI specific code should be in libembroidery, that's for Embroidermodder.
- Pedantic/ansi C unless there's a good reason to use another language.
- Meet the style above (i.e. PEP 7, Code Lay-out (https://peps.python.org/pep-0007/ #code-lay-out). We'll just fix the style if the code's good and it's not a lot of work.
- 'embroider' should be in POSIX style as a command line program.
- No dependancies that aren't "standard", i.e. use only the C Standard Library.

6.7.8 Image Fitting

A currently unsolved problem in development that warrants further research is the scenario where a user wants to feed embroider an image that can then be .

6.7.9 To Place

A *right-handed coordinate system* is one where up is positive and right is positive. Left-handed is up is positive, left is positive. Screens often use down is positive, right is positive, including the OpenGL standard so when switching between graphics formats and stitch formats we need to use a vertical flip ('embPattern flip').

'0x20' is the space symbol, so when padding either 0 or space is preferred and in the case of space use the literal '.'.

6.7.10 To Do

We currently need help with:

- Thorough descriptions of each embroidery format.
- Finding resources for each of the branded thread libraries (along with a full citation for documentation).
- Finding resources for each geometric algorithm used (along with a full citation for documentation).
- Completing the full '-full-test-suite' with no segfaults and at least a clear error message (for example "not implemented yet").
- Identifying "best guesses" for filling in missing information when going from, say '.csv' to a late '.pes' version. What should the default be when the data doesn't clarify?

- Improving the written documentation.
- Funding, see the Sponsor button above. We can treat this as "work" and put far more hours in with broad support in small donations from people who want specific features.

Beyond this the development targets are categories sorted into:

- Basic Features
- Code quality and user friendliness
- · embroider CLI
- Documentation
- GUI
- electronics development

6.7.11 Basic features

- Incorporate '#if 0' ed parts of 'libembroidery.c'.
- Interpret how to write formats that have a read mode from the source code and vice versa.
- Document the specifics of the file formats here for embroidery machine specific formats. Find websites and other sources that break down the binary formats we currently don't understand.
- Find more and better documentation of the structure of the headers for the formats we do understand.

6.7.12 Code quality and user friendliness

- Document all structs, macros and functions (will contribute directly on the web version).
- Incorporate experimental code, improve support for language bindings.
- Make stitch x, y into an EmbVector.

6.7.13 Documentation

Run 'sloccount' on 'extern/' and '.' (and) so we know the current scale of the project, aim to get this number low. Report the total as part of the documentation.

Try to get as much of the source code that we maintain into C as possible so new developers don't need to learn multiple languages to have an effect. This bars the embedded parts of the code.

6.7.14 GUI

- Make EmbroideryMobile (Android) also backend to 'libembroidery' with a Java wrapper.
- Make EmbroideryMobile (iOS) also backend to 'libembroidery' with a Swift wrapper.
- Share some of the MobileViewer and iMobileViewer layout with the main EM2. Perhaps combine those 3 into the Embroidermodder repository so there are 4 repositories total.
- Convert layout data to JSON format and use cJSON for parsing.

6.8 Development

6.8.1 Contributing

If you're interested in getting involved, here's some guidance for new developers. Currently The Embroidermodder Team is all hobbyists with an interest in making embroidery machines more open and user friendly. If you'd like to support us in some other way you can donate to our Open Collective page (click the Donate button) so we can spend more time working on the project.

All code written for libembroidery should be ANSI C89 compliant if it is C. Using other languages should only be used where necessary to support bindings.

6.8.2 Debug

If you wish to help with development, run this debug script and send us the error log.

While we will attempt to maintain good results from this script as part of normal development it should be the first point of failure on any system we haven't tested or format we understand less.

6.8.3 Binary download

We need a current 'embroider' command line program download, so people can update without building.

Chapter 7

Programming principles for the C core

End arrays of char arrays with the symbol "END", the code will never require this symbol as an entry.

Define an array as one of 3 kinds: constant, editable or data.

- Constant arrays are defined const and have fixed length matching the data.
- Editable arrays are fixed length, but to a length based on the practical use of that array. A dropdown menu can't contain more than 30 items, because we don't want to flood the user with options. However it can nest indefinately, so it is not restricted to a total number of entries.
- Data arrays is editable and changes total size at runtime to account for user data.

7.1 Style rules for arrays

1.

Chapter 8

Libembroidery on Embedded Systems

The libembroidery library is designed to support embedded environments as well as desktop, so it can be used in CNC applications.

Originally, the embedded system aspect of the Embroidermodder project was targeted at the higher end prototyping board as part of a general effort to make our own open source hardware ().

However, the task of building the interface for a full OSHW embroidery machine neatly splits into the tasks of building a user interface to issue the commands and the rig itself starting with the stepper motors that wire into this control circuit. A well built control circuit could issue commands to a variety of different machine layouts (for example many features are not present on some machines)

8.1 Compatible Boards

We recommend using an Arduino Mega 2560 or another board with equal or greater specs. That being said, we have had success using an Arduino Uno R3 but this will likely require further optimization and other improvements to ensure continued compatibility with the Uno. See below for more information.

8.2 Arduino Considerations

There are two main concerns here: Flash Storage and SRAM.

libembroidery continually outgrows the 32KB of Flash storage on the Arduino Uno and every time this occurs, a decision has to be made as to what capabilities should be included or omitted. While reading files is the main focus on arduino, writing files may also play a bigger role in the future. Long term, it would be most practical to handle the inclusion or omission of any feature via a single configuration header file that the user can modify to suit their needs.

SRAM is in extremely limited supply and it will deplete quickly so any dynamic allocation should occur early during the setup phase of the sketch and sparingly or not at all later in the sketch. To help minimize SRAM consumption on Arduino and

ensure libembroidery can be used in any way the sketch creator desires, it is required that any sketch using libembroidery must implement event handlers. See the inoevent source and header files for more information.

There is also an excellent article by Bill Earl on the Adafruit Learning System ¹.

8.3 Space

Since a stitch takes 3 bytes of storage and many patterns use more than 10k stitches, we can't assume that the pattern will fit in memory. Therefore we will need to buffer the current pattern on and off storage in small chunks. By the same reasoning, we can't load all of one struct beore looping so we will need functions similar to binaryReadInt16 for each struct.

This means the EmbArray approach won't work since we need to load each element and dynamic memory management is unnecessary because the arrays lie in storage. TODO: Replace EmbArray functions with 'embPattern_' load functions.

8.4 Tables

All thread tables and large text blocks are too big to compile directly into the source code. Instead we can package the library with a data packet that is compiled from an assembly program in raw format so the specific padding can be controlled.

In the user section above we will make it clear that this file needs to be loaded on the pattern USB/SD card or the program won't function.

TODO: Start file with a list of offsets to data with a corresponding table to load into with macro constants for each label needed.

8.5 Current Pattern Memory Management

It will be simpler to make one file per EmbArray so we keep an EmbFile* and a length, so no malloc call is necessary. So there needs to be a consistent tmpfile naming scheme.

TODO: For each pattern generate a random string of hexadecimal and append it to the filenames like 'stitchList_A16F.dat'. Need to check for a file which indicates that this string has been used already.

8.6 Special Notes

Due to historical reasons and to remain compatible with the Arduino 1.0 IDE, this folder must be called "utility". Refer to the arduino build process for more infofootnote:[https://arduino.githcli/0.19/sketch-build-process/].

libembroidery relies on the Arduino SD library for reading files. See the ino-file source and header files for more information.

¹http://learn.adafruit.com/memories-of-an-arduino?view=all

8.7 The Assembly Split

One problem to the problem of supporting both systems with abundant memory (such as a 2010s or later desktop) and with scarce memory (such as embedded systems) is that they don't share the same assembly language. To deal with this: there will be two equivalent software which are hand engineered to be similar but one will be in C and the other in the assembly dialects we support.

All assembly will be intended for embedded systems only, since a slightly smaller set of features will be supported. However, we will write a 'x86' version since that can be tested.

That way the work that has been done to simplify the C code can be applied to the assembly versions.

Chapter 9

Electronics development

9.1 Ideas

Currently experimenting with Fritzing 8 (8), upload netlists to embroiderbot when they can run simulations using the asm in 'libembroidery'.

Create a common assembly for data that is the same across chipsets 'libembrodiery_data_internal.s'. Make the defines part of 'embroidery.h' all systems and the function list 'c code only'. That way we can share some development between assembly and C versions.

Chapter 10

Mobile

Again, it would help to use the C library we have already developed, however for Android the supported platform is for Java applications.

https://github.com/java-native-access/jna

https://github.com/marketplace/actions/setup-android-ndk

https://developer.android.com/ndk/guides

See the bindings section for how this is achieved.

GNU Free Documentation License

Version 1.3, 3 November 2008 Copyright © 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.

<https://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondarily, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "**Document**", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "**you**". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "**Modified Version**" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "**Secondary Section**" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "**Cover Texts**" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "**Transparent**" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "**Opaque**".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "**Title Page**" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

The "**publisher**" means any person or entity that distributes copies of the Document to the public.

A section "**Entitled XYZ**" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "**Acknowledgements**", "**Dedications**", "**Endorsements**", or "**History**".) To "**Preserve the Title**" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- K. For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

- M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.
- N. Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.
- O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements".

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright

holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See https://www.gnu.org/licenses/.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A "Massive Multiauthor Collaboration" (or "MMC") contained in the site means any set of copyrightable works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

"Incorporate" means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.

ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright © YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with . . . Texts." line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
